

PROVIDING INTERDISCIPLINARY INTEGRATION AS A FACTOR INCREASING THE EFFICIENCY OF PRE- CONTROLLMENT MILITARY TRAINING

Agzamov Inom Salimjonovich

Tashkent State Pedagogical University named after
Nizami, Faculty of Military Education Teacher

Abstract

In recent years, improving the quality and effectiveness of the education system in the country, forming modern knowledge and skills in kindergarten students, pupils and students, close cooperation between educational systems and the field of science and systematic work is being carried out to ensure integration, integrity and continuity of education.

INTRODUCTION

At the same time, the current state of the national education system is to modernize it based on the requirements of the times, to educate young people to be highly educated, physically and spiritually healthy people, to strengthen the authority of the leaders and pedagogues of educational institutions. increase, requires the implementation of consistent measures to create the necessary conditions for their effective operation.

In order to improve the spheres of education and science of our country, to further increase the respect for teachers and pedagogues, scientific and creative intellectuals in our society, to develop the professional skills of students, and to expand the participation of the private sector in the system:

1. In the new development period of Uzbekistan, the following should be defined as the main directions of further development of the fields of education and science:

- training of new generation personnel with high intellectual and spiritual potential who are able to come up with new initiatives and ideas for the country's development and implement them. formation of knowledge and knowledge;
- establishing a national education system capable of withstanding today's fierce global competition, improving textbooks and training manuals based on modern requirements, creating a new generation of them, optimizing training programs and standards;
- to increase the position and status of the leading employees of educational institutions, pedagogues and trainers, professors and representatives of the scientific fields in our society, to properly appreciate their hard work and provide financial incentives based on the effectiveness of their activities;
- creating the necessary conditions for regular improvement of professional skills and efficiency of pedagogic staff, improving the system of professional development based on the principle of "lifelong learning";

- to expand the role of the private sector in the provision of scientific research and educational services, to create a competitive environment through the establishment of non-governmental educational organizations in the regions, to develop public-private partnerships in the field of education;
- creation of a system of automation of education management and comprehensive analysis using modern information and communication technologies, further development of electronic resources and distance education, popularization of professions in the IT field among students;
- turning science into the main driving force of the economy, expanding the scope of scientific research, stimulating the innovative activities of talented young scientists, further strengthening and developing the potential of existing scientific organizations;
- introduction of highly effective international practices into the educational system, implementation of systematic work on inclusion of republican educational organizations in prestigious international ratings.

Moral-political, mental and physical preparation of students for the defense of the Motherland is carried out in the entire educational system of the school. Therefore, every teacher should explain to the students the international and domestic situation, the foreign and domestic policy of the Republic of Uzbekistan, the defense of the country and the strengthening of the Armed Forces.

General education subjects in the educational institution, together with extracurricular activities, form in students a broad worldview, constant readiness for the defense of the Motherland, and the qualities necessary for this readiness. A decisive place here belongs to such subjects as history, social studies, and literature. Because these subjects provide students with knowledge about the laws of society's development, form hatred for the enemies and enemies of our country, respect for the past of our people, and confidence in the future.

Special "Alpomish" and "Barchinoy" tests are organized in educational institutions to determine the physical fitness of students. A methodical council will be formed in the educational institution to conduct these special tests. This council includes the head of pre-draft military education, physical education teachers.

As a result of good organization of work in educational institutions, students achieve high results in acquiring military qualifications. The connection of pre-service military education with other subjects serves to further improve it and increase the effectiveness of the educational process.

Issues such as increasing requirements for training for military service in the ranks of the Armed Forces, further improvement and development of the educational process of pre-Conscript military education in educational institutions, and increasing its effectiveness are being raised.

In order to fundamentally change the content, forms and methods of the educational process, to enrich it with new content, firstly, it is necessary to have accurate information

about the development of military science and technology, tactical industry, and secondly, o It is necessary to organize the educational process on a scientific basis.

A special feature of the current situation is the rapid growth of scientific information in military work. Therefore, contradictions are emerging between the content, form and methods of training.

In the conditions of rapid growth of scientific knowledge and information, it is necessary to determine the optimal amount of knowledge, skills and qualifications to be imparted to students.

Therefore, it is necessary to move from informative teaching to methodical forms. One of the important areas of improvement of the educational process is bringing theoretical knowledge closer to the practice in the troops. Therefore, in the training process, it is necessary to create such situations that resemble real combat situations.

The effectiveness of the educational process directly depends on the quality of teaching tools. The set of educational tools includes textbooks, slides, posters, tables, video recorders, etc. Some of these require the use of technical means. Creating scientifically based teaching tools is one of the important tasks of the methodological council of the educational institution.

One of the important directions of improving the educational process is the development of standards for determining and evaluating the effectiveness of teaching.

Improving the educational process is a complex and multifaceted process. It requires orderly, goal-oriented actions of the pedagogical team of the educational institution.

Love for the country is the true form of patriotism. To be a worthy child of the Motherland, to deeply understand that we are closely connected with the dear soil, to treat it like real children, to return a hundred contributions if something is taken from it is another form of understanding and honoring the Motherland.

Therefore, the work being done to preserve the Motherland, which is the past, present and future of our people, is not a big or small thing, the most important thing in this work is to be loyal to it.

There are not a few people among us who, with such experiences, are working wisely in the work of educating young people to be worthy of the defense of the Motherland, in Uzbek terms.

Our main task is to find brave boys who love this independent Motherland with all their hearts, who are ready to sacrifice their lives for the sake of its development and freedom, and who are ready to sacrifice their lives if necessary. It is to educate and bring up Uzbek patriots. We can achieve these noble goals by properly organizing the preparation of young people before the Convocation and conducting it at high levels.

President of the Republic of Uzbekistan Sh. In the words of Mirziyoyev - "Showing an example of indomitable will and courage, he dedicated his life to all aspects of development of our dear Motherland, remembering the sacred memory of the ancestors who sacrificed their lives for today's peaceful and peaceful days, continuing their good deeds, walking in our ranks. Respecting the elderly is the highest standard of humanity and an eternal value

characteristic of our tolerant and noble people who live in the belief that we need peace and security.

In this regard, the main goal that the President sets before our Armed Forces is that all young people who have completed military and army service are physically and mentally healthy, intellectually mature, who have determined their place in life, and are reliable people in all respects. They emphasized the importance of scientific justification of the methodology of inclusion in the current educational process.

Any teacher, trainer who is determined to educate the young generation must have thorough knowledge of their field, improve it further, show reasonable initiatives, and most importantly, be dedicated to their work. shows.

First of all, the presence of desire and desire, as well as the knowledge of each military leader's rights and obligations and the desire to fulfill them, play a very important role in solving any issue.
